Layout Concept Draft

Key Factors for Explanation

Potential Problems

Datasets Needed

Datasets Available on Opendosm

Possible Output Files

Content

Software/Tools needed:

- MS Visual Studio Code
- IBM Watson Studio
- IBM Cognos Analytics
- Terminal

Libraries needed:

- Pandas
- Matplotlib
- Folium
- Plotly express
- Dash (html, dcc)
- *Seaborn
- *NumPy
- *BeautifulSoup (for web scraping)

Topic Considered:

- Johor Population (total, male vs female, newborn by years, etc.)
- OR
- Malaysia Population/Crime Record/Immigrants etc.

FINAL TOPIC: Newborn Trend in Malaysia (comparing states)

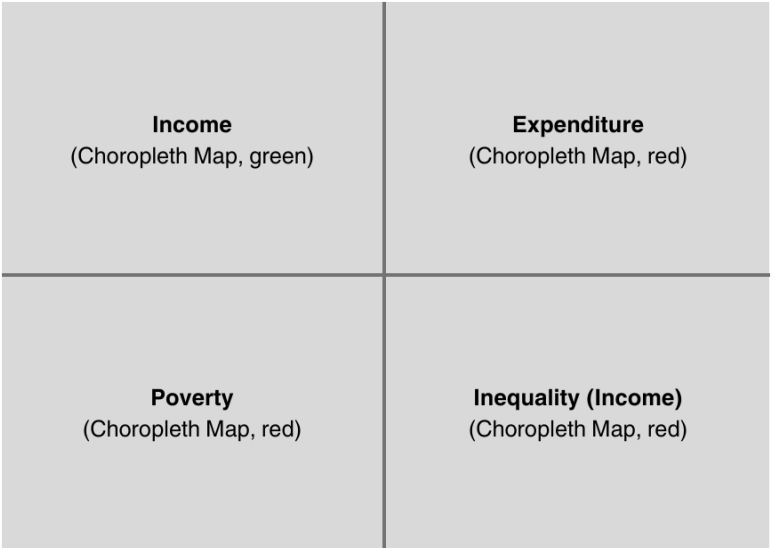

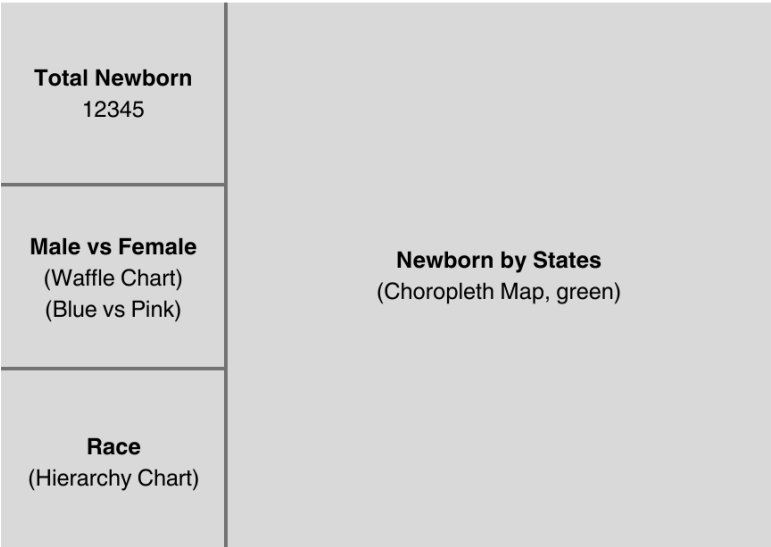

Layout concept draft:

- Other charts: choropleth map of total population/new born in year/total
- Can use choropleth map to compare correlation of different factors with newborn in the different states

Newborn Trend in Malaysia

Selected Year

Content

- diagnose and explain the situation from the perspective of social and economy, e.g.

- Income/annual salary
- GDP
- Living cost
- Inflation
- Unemployment rate
- Tax
- Marriage percentage for age 25 - 40/by race
- Health indices like BMI
- Poverty
- Income inequality
- Etc.

- Use GitHub to host the project

Potential Problem(s):

- hosting issue (if cannot host a website then try on Cognos Analytics to create dashboard)
- unable to access datasets

Datasets required:

- Population by states
- Newborn/birth by year, states, sex and ethnicity
- income/annual salary
- GDP
- living cost
- inflation
- unemployment rate
- tax
- Poverty
- Income inequality
- marriage percentage for age 25 - 40/by race
- health indices like BMI

Datasets available on OpenDOSM:

Population	by year, state, age, sex, ethnicity
------------	-------------------------------------

Content

Birth	by year, state, sex, ethnicity
Income	mean and median by year, state
Expenditure	income (mean & median), expenditure and poverty by year, state
Poverty	by year, state
Income inequality	by year, state
GDP	
Consumer prices	

Possible Output Files:

- HTML file for the dashboard
- Excel worksheet for data tables, analysis, visuals
- Python notebook file for data wrangling, analysis, visuals
- Python coding file for dashboard
